Track - Problem Statement:

Track Chosen

Track 1: Coordinated AI Interview Panel

Problem Statement

Build an adaptive voice platform where coordinated AI interviewers represent different hiring roles, remember the candidate's previous answers and simulate an entire multi-round interview process.

Product Name

RoundCraft

Positioning

A flight simulator for job interviews.

Tagline

Practice the full interview, not just the answers.

Problem Description:

Entry-level competition is intensifying: Handshake recorded 15% fewer job postings and 30% more applications per job for the Class of 2025. Meanwhile, 70% of employers use skills-based hiring, with 87% applying it during interviews. Yet candidates still practise isolated questions, leaving them unprepared for adaptive, multi-round conversations and consistent evaluation.

Sources: Handshake, Class of 2025 · NACE, Job Outlook 2026.

Proposed Solution / Idea Overview:

RoundCraft is a practice-only, voice-first interview simulator for candidates across job functions. Users either choose a professionally designed interview loop (recruiter screen, behavioural, functional, case, hiring-manager or panel round) or paste a job description to generate the appropriate sequence. They never configure agents. A coordinator assigns each AI interviewer a distinct role, rubric and objective. Through Agora, interviewers conduct natural conversations, interrupt, probe vague claims and hand off unresolved points to later rounds. Shared cross-round memory allows the next interviewer to test contradictions, missing evidence and weak competencies instead of restarting from zero. After the loop, RoundCraft produces independent round scorecards, transcript-linked evidence, an offer-readiness skill map and targeted replay drills. Unlike question banks, single-chatbot mocks or tools that assist during real interviews, RoundCraft recreates the complete interview loop and trains candidates before the real one.

Additional Notes:

What Makes It Different

- Complete interview loop instead of one isolated mock session.
- Agents share candidate evidence and unresolved questions across rounds.
- Expert-designed interview formats and evaluation rubrics.

Initial Demo

Product Manager interview loop: **1.** Recruiter screening **2.** Product-sense round **3.** Execution and metrics round **4.** Cross-functional panel.

PM demonstrates the system initially; the product remains role-independent.

- Every score is connected to supporting transcript evidence.
- Weak competencies automatically become targeted practice drills.
- Strictly for preparation. No assistance during real interviews.

Business Model

- Free diagnostic interview.
- Paid interview-cycle passes and individual subscriptions.
- Institutional licences for universities, placement cells and bootcamps.
- Future interview packs for consulting, sales, finance, marketing and operations.

LucidAero

THANK YOU

Practice the full interview, not just the answers.
